【G】 次の対話を読んで、あとの問いに答えなさい。

Misaki: Mom, how can I make delicious food like you?

Ms. Ito: Well, do you know that there are five basic *tastes?

Misaki: Sweet, salty, sour, and bitter, right? But what's the last one?

Ms. Ito: It's a taste () "umami". Umami is one of the five basic tastes, together with sweet, sour, salty, and bitter. The five basic tastes are unique tastes that cannot be created by *combining any other tastes. In 1908, a Japanese scientist *discovered that the delicious taste of *seaweed soup stock was *glutamic acid, and he called that taste "umami."

Misaki: How can I combine the five basic tastes to make delicious food?

Misaki: Can we make umami stronger too?

Ms. Ito: Yes, we can. There are several *ingredients we can use to create umami. One of them is *monosodium glutamate, or MSG. If we combine MSG with either *sodium inosinate or *sodium guanylate, we can make the umami taste up to about 8 times stronger.

Misaki: That's amazing!

Ms. Ito: This kind of umami *synergy was discovered in 1960. But foods that have used this synergy have existed for a long time. One example is putting a slice of tomato and a meat *patty together in a hamburger.

Misaki: So people in the past knew about (ウ) that synergy from experience.

Ms. Ito: The way we experience taste also changes based (\checkmark) the *temperature of the food. For example, foods taste saltier (\Rightarrow).

Misaki: That's why, when we make cold soup, it tastes too salty if we season it so it tastes good while it's still hot.

Ms. Ito: That's right. Sweet tastes are the strongest in foods that are close to our body temperature. In foods that are colder than our body temperature, the sweet tastes become weaker. When ice cream *melts, it's too sweet, isn't it? That's another example of how our *taste buds are *affected differently by tastes and communicate tastes differently to our *nervous systems at different temperatures.

Misaki: I see. Do taste *substances themselves also change based (

') the temperature?

Ms. Ito: Yes, they do. For example, fruit sugar, which gives fruit its sweetness, becomes sweeter at low temperatures.

Misaki: That's why frozen fruit tastes so good!

Ms. Ito: Exactly. But taste isn't the only thing that *determines whether we think something is delicious. The *appearance and smell of the food and the *atmosphere also play a role. We experience deliciousness with all five of our senses.

Misaki: You're right. Food always tastes better when we eat together with family and friends.

 - 1 at colder temperatures
 - 2 at hotter temperatures
 - When salty tastes are combined with bitter tastes
 - when salty tastes are combined with sour tastes
- (27) 対話の内容に合うものとして最も適切なものを1つ選び、番号で答えなさい。
 - You can create umami by combining the other four tastes: sweet, salty, bitter, and sour.
 - Watermelon tastes sweeter when you put salt on it, because salt makes the bitter taste weaker.
 - When you are making food that is colder than your body temperature, you should add fewer sweet ingredients.
 - **(4)** To create delicious food, we need to consider not only taste, but also many other elements.

L. L. Zamenhof was born in Bialystok, Poland in 1859. At that time, various *ethnic groups such as *Jews, Russians, *Poles, and Germans lived in Bialystok, and (ア) there was a lot of *conflict among these different groups. Zamenhof, who was a Jewish Pole, also experienced *bullying himself.

When he was 14, Zamenhof moved to *Warsaw, but he didn't forget what he had experienced in Bialystok. He thought that the main reason for conflict among different ethnic groups was the difficulty in understanding one another that was *caused by the lack of a common language. He decided to create an international language that would be simple and easy to learn. When he was 19, he created the first version of a new language.

After that, Zamenhof studied at universities in *Moscow and Warsaw, and became a doctor. While working as a doctor, he also *improved his language, and in 1887, he *published the first textbook for his language. At that time, he used the pen name "Esperanto". As the language *spread little by little, it began to be known as "Esperanto". In 1905, the first World Esperanto *Conference was held in France, and in 1906, an Esperanto *institute was also *founded in Japan.

However, when *World War I broke out in 1914, Warsaw was *captured by the German *army, and many Esperantists died. Zamenhof continued his activities, but years of hard work had weakened him, and he *passed away in Warsaw in April 1917.

*Despite this, however, (ウ) Esperanto spread throughout the world, and there are now Esperanto speakers in over 130 countries. It is said that hundreds of thousands of people use Esperanto in their daily lives, and millions of people have studied the basics. Many literary works have been written in Esperanto, and there are even Esperanto rock and hip-hop songs.

Zamenhof did not create Esperanto as only a useful tool. Some scholars say that Zamenhof's love for *humankind and his *idealistic belief that people of all ethnic groups should be equal were the basis for his beliefs. "Esperanto" means "one who hopes." Zamenhof hoped that the spread of his language would deepen understanding among people of different ethnic backgrounds and put an end to conflict. It can be said that Esperanto itself is a language that hopes for world (\Rightarrow).
